The brand new Springfield XD Mod.2™ 40S&W Sub-Compact includes a variety of fine tuned, new and improved features. Mod.2™ ergonomics are a next-level experience that you have to feel to believe and understand. The entire interface between the shooter and the gun has been updated, while retaining the Point-and-Shoot characteristics that made it famous. Key features have been tweaked and enhanced to further enable effortless shooting. And you’ll find that the overall package is now more concealable as well. Equipped with the GripZone™, the XD® Mod.2™ Sub-Compact 40 S&W applies ergonomic science to every surface that touches your hand. The GripZone™ is a set of frame features working in unison to optimize interaction between the human hand and the pistol. Within the GripZone™, there are three distinct textures, each engineered for a specific purpose. The

re-contoured, slimmer frame and slide add up to a far more natural grip feel that has nearly twice the magazine capacity and is only 2 tenths of an inch thicker than single stack conceal carry models. The High-Hand[®]; grip relief and High-Hand[®]; beavertail enable the hand to be positioned as high as possible toward the barrel bore thereby greatly reducing the pistol's felt recoil. The no-snap trigger guard minimizes possible unintended contact with a holster or clothing. All of these GripZone[®]; advantages are ergonomic features that you will truly feel. It all adds up to a pistol that naturally and comfortably stays positioned in your hand.
