Product Summary

Thompson Machine QMF .45

Product Description

ALL FIREARMS AND CLASS 3 ITEMS MUST BE SHIPPED TO FFL.

The QMF

To date, the majority of .45acp pistol suppressors on the market have been large and ungainly. Those few that are smaller and less heavy have been, well.....LOUD. The Thompson Machine QMF breaks that mold with authority. At only 7 1/8" in

length, and weighing a scant 5.4 ounces, the QMF is what a .45 suppressor should be; quiet, compact, light and affordable.

That's just the beginning of the list of the QMFs attributes. Unlike the competition, the QMF can be fully and easily disassembled for cleaning. This allows the use of lead non-fmj bullets without fear of clogging up your investment and rendering it an expensive paperweight. The QMF includes the necessary take-down tool at no extra charge, and functions flawlessly on most full and mid-size .45acp pistols including Glocks, XDs, and 1911s.
